## RESEARCH EXPERIENCE

8/2017  
|  
10/2013

- **Transcriptomic profiling of a human kidney cancer cell line, Caki-2, after treatment of Ixazomib, Ursolic acid and jointly using microarray technology.**

Advisor: Prof. Marzanna Cechowska-Pasko, Ph.D.

📍 Department of Pharmaceutical Biochemistry, Medical University of Białystok.

- Budget management (successful negotiations with vendors within budget);
- Project manager and executive (wet lab, in silico analyses);
- Performed **wet laboratory** experiments (Agilent's gene expression and miRNA microarrays of indirect *transcriptome* from total RNA (mRNA, lncRNA, lincRNA, sno/sRNA, ncRNA, miscRNA, miRNA), quality controls (pos/neg/spike-in), MTT drug testing (proteasome inhibitor, terpen), total RNA/DNA isolation, purification, quality, quantity (Bioanalyzer, NanoDrop), gene validation (qPCR, primer design, analysis))
- and **in silico** using open-source programming/biostatistical *R/RStudio* with packages from cran, bioconductor, github repos (pre-processing, numerical validation aware, glm, Bayesian, multivariate, pathway enrichment analysis). On time delivering wet lab experiments (I take care of the details and I am very precise, successful troubleshooting), performing and precaution of misleading computational analysis. [manuscript in preparation]
